
Photo Report City of Santa Paula March 5-8, 2012

A) Residential Curbside Diversion Program

Photo 1: Staff observed about 95 percent set out rate for residential recycling carts.

1

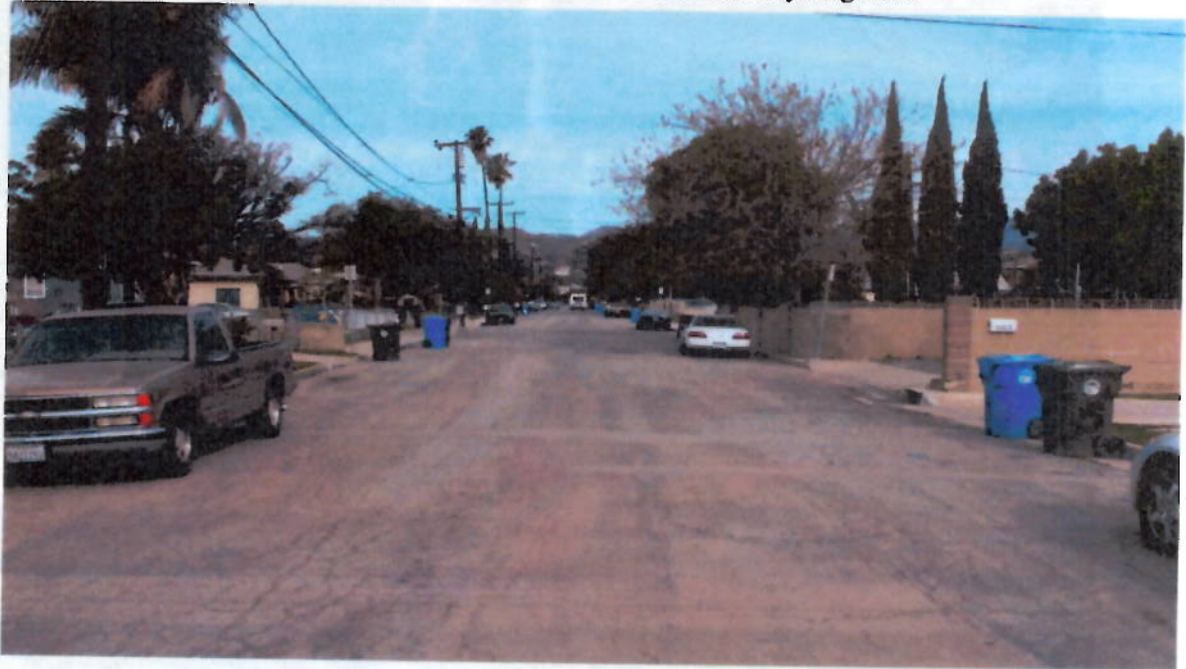

Photo 2: Staff observed minimal contamination of curbside recycling.

2

B) Residential Trash Loads at Landfill

Photo 1-2: Staff observed several residential trash loads at the landfill. Most loads had insignificant amount of recyclables targeted by the City.

1

2

C) Commercial Diversion Program

Photo 1: A commercial recycling bin with minimal contamination. Most bins observed had minimal contamination.

Photo 2: Staff observed several loads of recyclables from commercial businesses with minimal contamination. Staff estimates that the loads were 90 plus percent clean recyclables.

D) Commercial Trash Loads at Material Recovery Facility (MRF)

Photo 1: Commercial recycling program diversion efforts are enhanced by processing the commercial waste loads through the MRF. This provided additional recovery of recyclables prior to landfilling.

E) Greenwaste Program

Photo 1-2: Typical load of greenwaste. The loads were predominantly clean and had minimal contamination.

1

2

F) Multifamily Program

Photo 1: This photo shows a typical multi-family recycling bin full of high value recyclables.

Photo 2: There were a few trash bins that contained a significant amount of recyclables. In order to increase diversion from this sector, the City should continue to implement its outreach and education programs.
